COVER FLIP UP

Il Coperchio FLIP UP è una soluzione avanzata progettata per ottimizzare la gestione della raccolta differenziata in ambienti domestici e professionali. Realizzato in polipropilene (PP) caricato con talco al 20%, il coperchio garantisce un'elevata resistenza meccanica e stabilità dimensionale, rendendolo adatto per un uso prolungato e intensivo. Il materiale, altamente resistente agli urti e agli agenti esterni, contribuisce inoltre a una migliore rigidità strutturale, pur mantenendo leggerezza e facilità d'uso.

Le spine di giunzione in Nylon caricato conferiscono al sistema una resistenza superiore alla fatica e all'usura, garantendo solidità e durabilità nel tempo. Questo tipo di connessione tra i componenti assicura che il meccanismo di apertura e chiusura mantenga la sua efficienza anche dopo numerosi cicli di utilizzo.

Il coperchio è dotato di doppia presa ergonomica antiscivolo, posizionata sia sulla parte frontale che sulla superficie superiore, per agevolare la manipolazione. Questo design permette un controllo sicuro e stabile del coperchio, riducendo lo sforzo necessario per l'apertura e la chiusura.

Un'ulteriore caratteristica funzionale del FLIP UP è il sistema di incastro blocca sacchetto integrato, che consente il fissaggio sicuro del sacchetto all'interno del secchio, evitando che si muova o si sfilì durante l'uso. Questo sistema offre una soluzione pratica per mantenere ordine e pulizia, migliorando l'efficienza operativa.

Il coperchio è stato progettato specificamente per integrarsi con tutti i secchi grandi della linea Elletipi Cover Box, garantendo un'installazione semplice e una compatibilità perfetta. Grazie all'uso di materiali resistenti e tecnologie di assemblaggio avanzate, il Coperchio FLIP UP rappresenta un aggiornamento tecnico e funzionale per tutte le linee di pattumiere Elletipi Srl.

The FLIP UP Lid is an advanced solution designed to optimise waste management in domestic and professional environments. Made of 20% talc-filled polypropylene (PP), the lid guarantees high mechanical strength and dimensional stability, making it suitable for prolonged and intensive use. The material, which is highly resistant to impact and external agents, also contributes to improved structural rigidity, while maintaining lightness and ease of use.

Filled nylon splice pins give the system superior resistance to fatigue and wear, guaranteeing strength and durability over time. This type of connection between the components ensures that the opening and closing mechanism retains its efficiency even after numerous cycles of use.

The lid has an ergonomic double non-slip grip, positioned on both the front and top surface, for easy handling. This design allows safe and stable control of the lid, reducing the effort required to open and close it.

An additional functional feature of the FLIP UP is the integrated bag-locking system, which allows the bag to be securely fixed inside the bucket, preventing it from moving or slipping out during use. This system offers a practical solution for maintaining order and cleanliness, improving operational efficiency.

The cover is specifically designed to integrate with all buckets in the Elletipi Cover big Box range, ensuring easy installation and perfect compatibility. Thanks to the use of durable materials and advanced assembly technology, the FLIP UP Cover represents a technical and functional upgrade for all Elletipi Cover Box lines.
